Semantics and Verification of Software

Lecture 1: Introduction

Thomas Noll

Lehrstuhl für Informatik 2
(Software Modeling and Verification)

RWTH Aachen University

noll@cs.rwth-aachen.de

http://www-i2.informatik.rwth-aachen.de/i2/svsw08/

Winter semester 2008/09

Outline

People

- Lectures: Thomas Noll
  - Lehrstuhl für Informatik 2, Room 4211
  - E-mail `noll@cs.rwth-aachen.de`
  - Phone (0241)80-21213
- Exercise classes:
  - Tingting Han (`tingting.han@cs.rwth-aachen.de`)
  - Alexandru Mereacre (`mereacre@cs.rwth-aachen.de`)
- Student assistants:
  - Johanna Nellen (`johanna.nellen@rwth-aachen.de`)
  - Maximilian Odenbrett (`maximilian.odenbrett@rwth-aachen.de`)

Target Audience

- Diploma programme (Informatik)
  - Theoretische Informatik
  - Vertiefungsfach Formale Methoden, Programmiersprachen und Softwarevalidierung
- Master programme (Software Systems Engineering)
  - Theoretical CS
  - Specialization Formal Methods, Programming Languages and Software Validation

Target Audience

- Diploma programme (Informatik)
  - Theoretische Informatik
  - Vertiefungsfach Formale Methoden, Programmiersprachen und Softwarevalidierung
- Master programme (Software Systems Engineering)
  - Theoretical CS
  - Specialization Formal Methods, Programming Languages and Software Validation
- In general:
  - interest in formal models for programming languages
  - application of mathematical reasoning methods
- Expected: basic knowledge in
  - essential concepts of imperative programming languages
  - formal languages and automata theory
  - mathematical logic

Organization

- Schedule:
  - Lecture Mon 11:45–13:15 AH 2 (starting October 20)
  - Lecture Thu 13:30–15:00 AH 1
    (starting October 16; **not** Oct. 30/Nov. 27)
  - Exercise class Mon 13:30-15:00 AH 2 (starting October 27)
- 1st assignment sheet: next Monday
- Work on assignments in groups of three
- Examination (8 ECTS credit points):
  - written or oral (depending on number of candidates)
  - if written: beginning of February
- Admission requires at least 50% of the points in the exercises
- Solutions to exercises and exam in English or German

Outline

Aspects of Programming Languages

Syntax: "How does a program look like?"
(hierarchical composition of programs from structural components)
⇒ Compiler Construction

Semantics: "What does this program mean?"
(execution evokes state transformations of an [abstract] machine)

Pragmatics:
- length and understandability of programs
- learnability of programming language
- appropriateness for specific applications, ...

⇒ Software Engineering

Aspects of Programming Languages

Syntax: "How does a program look like?"
(hierarchical composition of programs from structural components)
⇒ Compiler Construction

Semantics: "What does this program mean?"
(execution evokes state transformations of an [abstract] machine)

Pragmatics:
- length and understandability of programs
- learnability of programming language
- appropriateness for specific applications, ...

⇒ Software Engineering

Historic development:

- Formal syntax since 1960s (LL/LR parsing); semantics defined by compiler/interpreter
- Formal semantics since 1970s (operational/denotational/axiomatic)

Motivation for Rigorous Formal Treatment I

Example 1.1

1. How often will the following loop be traversed?

```
for i := 2 to 1 do ...
```

FORTRAN IV: once

PASCAL: never

Motivation for Rigorous Formal Treatment I

Example 1.1

1. How often will the following loop be traversed?

```
for i := 2 to 1 do ...
```

FORTRAN IV: once
PASCAL: never

2. What if `p = nil` in the following program?

```
while p <> nil and p^.key < val do ...
```

Pascal: strict boolean operations $\lightning$
Modula: non-strict boolean operations $\surd$

Motivation for Rigorous Formal Treatment II

- Support for development of
  - new programming languages: missing details, ambiguities and inconsistencies can be recognized
  - compilers: automatic compiler generation from appropriately defined semantics
  - programs: exact understanding of semantics avoids uncertainties in the implementation of algorithms

Motivation for Rigorous Formal Treatment II

- Support for development of
  - new programming languages: missing details, ambiguities and inconsistencies can be recognized
  - compilers: automatic compiler generation from appropriately defined semantics
  - programs: exact understanding of semantics avoids uncertainties in the implementation of algorithms
- Support for correctness proofs of
  - programs: comparison of program semantics with desired behaviour (e.g., termination properties)
  - compilers:

$$\begin{array}{ccc} \text{programming language} & \overset{\text{compiler}}{\longrightarrow} & \text{machine code} \\ \text{semantics} \downarrow & & \downarrow \text{(simple) semantics} \\ \text{meaning} & \overset{?}{=} & \text{meaning} \end{array}$$

  - optimizing transformations:

$$\begin{array}{ccc} \text{code} & \overset{\text{optimization}}{\longrightarrow} & \text{code} \\ \text{semantics} \downarrow & & \downarrow \text{semantics} \\ \text{meaning} & \overset{?}{=} & \text{meaning} \end{array}$$

Kinds of Formal Semantics

Operational semantics: describes computation of the program on some (very) abstract machine (G. Plotkin)

Kinds of Formal Semantics

Operational semantics: describes computation of the program on some (very) abstract machine (G. Plotkin)

Denotational semantics: mathematical definition of input/output relation of the program by induction on its syntactic structure (D. Scott, C. Strachey)

Kinds of Formal Semantics

Operational semantics: describes computation of the program on some (very) abstract machine (G. Plotkin)

Denotational semantics: mathematical definition of input/output relation of the program by induction on its syntactic structure (D. Scott, C. Strachey)

Axiomatic semantics: formalization of special properties of the program by logical formulae (assertions and proof rules; R. Floyd, T. Hoare)

Overview of the Course

2. The imperative model language WHILE
3. Operational semantics of WHILE
4. Denotational semantics of WHILE
5. Equivalence of operational and denotational semantics
6. Axiomatic semantics of WHILE
7. Dataflow analysis
8. Extensions: procedures and dynamic data structures

Literature

Outline

Syntactic Categories

WHILE: simple imperative programming language without procedures or advanced data structures

Syntactic Categories

WHILE: simple imperative programming language without procedures or advanced data structures

Syntactic categories:

Category	Domain	Meta variable
Numbers	$\mathbb{Z} = \{0, 1, -1, \ldots\}$	z
Truth values	$\mathbb{B} = \{\mathsf{true}, \mathsf{false}\}$	t
Variables	$Var = \{\mathtt{x}, \mathtt{y}, \ldots\}$	x
Arithmetic expressions	$AExp$	a
Boolean expressions	$BExp$	b
Commands (statements)	Cmd	c

Syntax of WHILE Programs

Definition 1.2 (Syntax of WHILE)

The syntax of WHILE Programs is defined by the following context-free grammar:

$$
\begin{aligned}
a &::= z \mid x \mid a_1 \texttt{+} a_2 \mid a_1 \texttt{-} a_2 \mid a_1 \texttt{*} a_2 \in AExp \\
b &::= t \mid a_1 \texttt{=} a_2 \mid a_1 \texttt{>} a_2 \mid \neg b \mid b_1 \wedge b_2 \mid b_1 \vee b_2 \in BExp \\
c &::= \texttt{skip} \mid x \texttt{ := } a \mid c_1 \texttt{;} c_2 \mid \texttt{if } b \texttt{ then } c_1 \texttt{ else } c_2 \mid \texttt{while } b \texttt{ do } c \in Cmd
\end{aligned}
$$

Syntax of WHILE Programs

Definition 1.2 (Syntax of WHILE)

The syntax of WHILE Programs is defined by the following context-free grammar:

$$a ::= z \mid x \mid a_1 \texttt{+} a_2 \mid a_1 \texttt{-} a_2 \mid a_1 \texttt{*} a_2 \in AExp$$
$$b ::= t \mid a_1 \texttt{=} a_2 \mid a_1 \texttt{>} a_2 \mid \neg b \mid b_1 \wedge b_2 \mid b_1 \vee b_2 \in BExp$$
$$c ::= \texttt{skip} \mid x \texttt{ := } a \mid c_1 \texttt{;} c_2 \mid \texttt{if } b \texttt{ then } c_1 \texttt{ else } c_2 \mid \texttt{while } b \texttt{ do } c \in Cmd$$

Remarks: we assume that

- the syntax of numbers, truth values and variables is given (i.e., no "lexical analysis")
- the syntax of ambiguous constructs is uniquely determined (by brackets, priorities, or indentation)

A WHILE Program

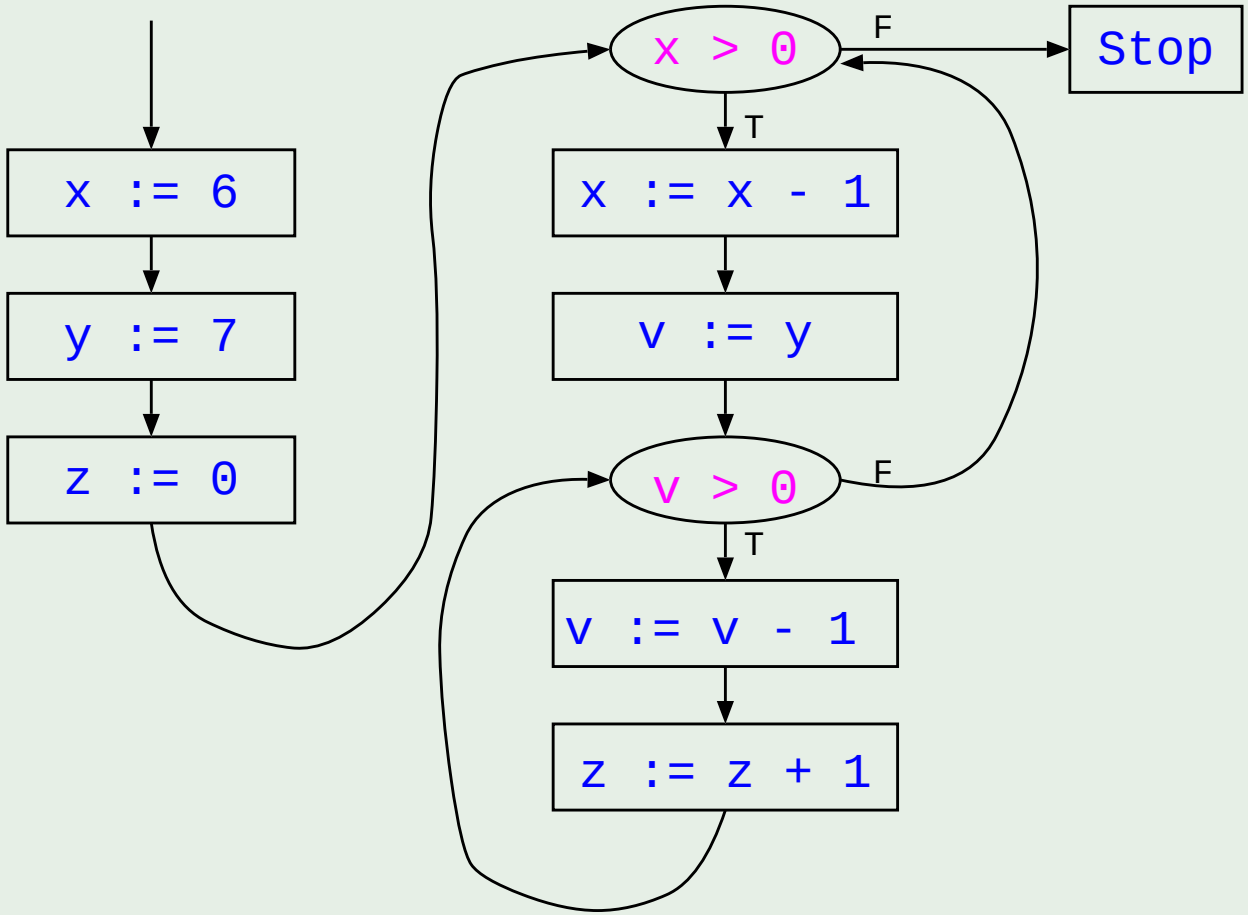
Example 1.3

```
x := 6;
y := 7;
z := 0;
while x > 0 do
  x := x - 1;
  v := y;
  while v > 0 do
    v := v - 1;
    z := z + 1
```

A WHILE Program and its Flow Diagram

Example 1.3

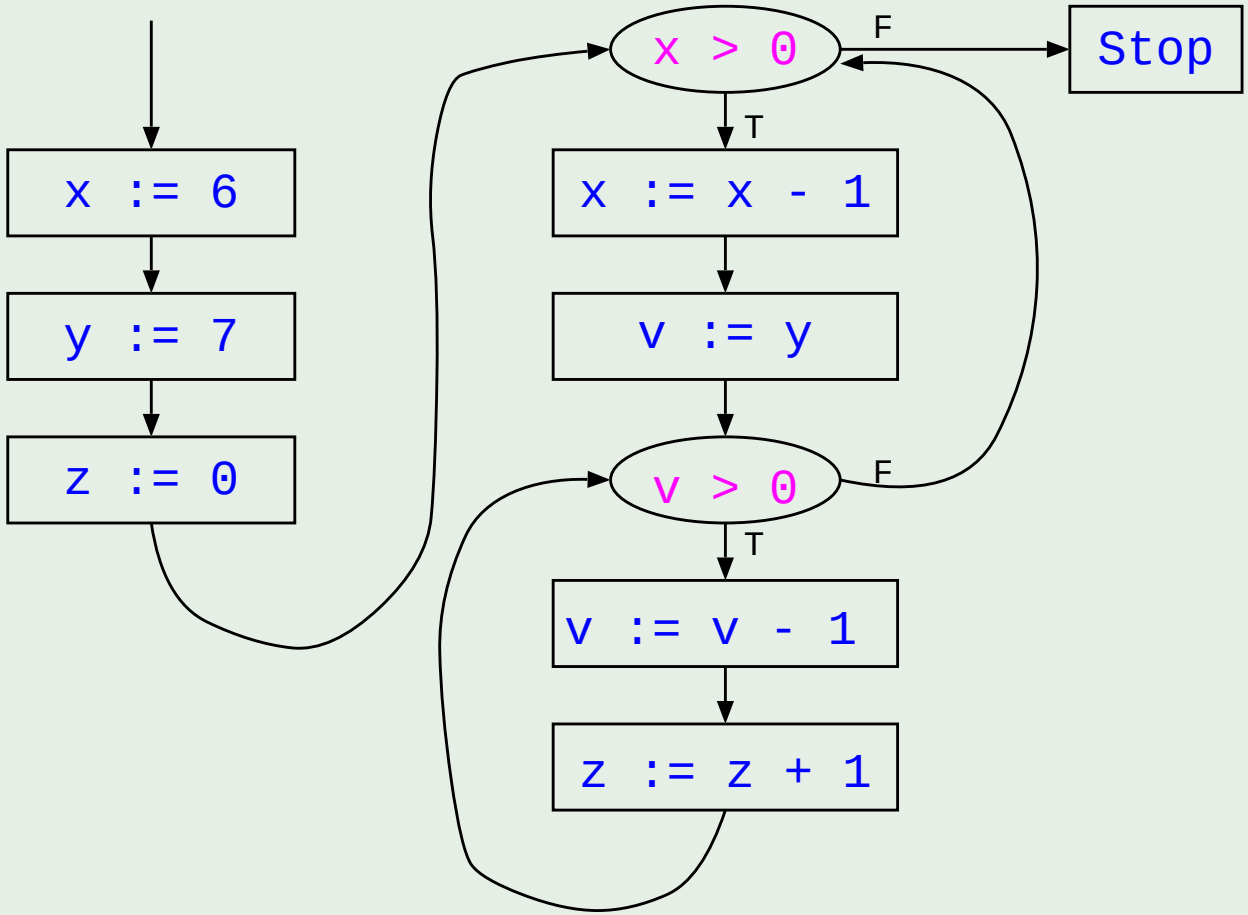
```
x := 6;
y := 7;
z := 0;
while x > 0 do
  x := x - 1;
  v := y;
  while v > 0 do
    v := v - 1;
    z := z + 1
```



A WHILE Program and its Flow Diagram

Example 1.3

```
x := 6;
y := 7;
z := 0;
while x > 0 do
  x := x - 1;
  v := y;
  while v > 0 do
    v := v - 1;
    z := z + 1
```



Effect: `z := x * y = 42`
